THE TORQUE MULTIPLIER

LKV SERIES, 500 - 54.000 Nm

Series LKV-40 bis 550RS

Integrated return safety „RS“ for CW/CCW rotation and safe operation (as of model LKV-40RS)

Integrated overload safety mechanism for gear unit protection

Lean, high-performance aluminium housing is 30% lighter than a steel one

Planet gear unit with ceramic-Teflon®-coated tooth flanks (as of model LKV-40) enables minimum lubrication

Drop-forged reaction arm with lock on function, made of chrome-vanadium steel for even greater stability

Supplied with individual GEDORE factory calibration certificate

Reinvented: The torque multiplier

The torque multiplier is probably the simplest device in high level torque bolting technology and has been around for over forty years. The GEDORE Torque Solutions GmbH has reinvented this proven tool. With a clever design and new functions, the new torque multiplier series is a great contribution to facilitating operations.

Housing and gear unit

The housing and gear unit are the innovations in this series. A new production method was created, based on nature. The housing is therefore approx. 30% lighter but still as rugged.

At the same time, the ceramic-Teflon® coating enables minimum device lubrication. While conventionally lubricated torque multipliers decrease in performance (efficiency) when the outside temperatures are colder, due to the increasing tenacity of the grease, this unit operates independently of the temperature.

Reaction arm

The reaction arm, which must resist the counter-forces during bolting operations, has also been completely reworked.

Force distribution was analysed using complex FEM methods. It is therefore even more stable and durable than before due to the shape and materials selected. In addition, the reaction arm is equipped with a patented hold function that prevents the gear teeth from slipping.

Non-destructive overload protection

The 40-550RS models are equipped with a non-destructive overload safety mechanism. This patent-filed innovation represents real cost savings for the user. The basis of this extra feature is a highly-dynamic, pre-tensioned slip-coupling. As soon as the maximum permissible input torque is exceeded, the „Slipper“ triggers with a clearly audible acoustic noise.

The torque multiplier is not damaged so that normal operation can be started again. This means that no assembly downtimes occur and the safety of the operator is actively supported.

Certified safety

A completely new benefit for the torque multiplier is the individual factory calibration certificate for each device. This has never been the case before. This allows bolting operations to be implemented at a high level of torque precision. The torque tables on the devices display the standard torque for HV bolts. The tables can also be modified on request to the individual torques of the operator.

ACCESSORIES FOR THE LKV-40 TO LKV-120RS

Reaction arm cranked with lock on function, made of drop-forged chrome-vanadium steel (up to LKV-80)

Reaction arm cranked with lock on function, made of light alloy with protective cap made of steel (from LKV-100)

Reaction arm made of light alloy, straight with adjustable locking knob with moveable square-end and retaining ring (up to LKV-100)

Technical data LKV-40 - 550RS

THE FUNCTION PRINCIPLE

i

The principle of torque multiplication

The chart representation demonstrates the principle of torque multiplication. Let us assume a 60 Nm input torque and a 240 Nm output torque. At a 1:4 ratio, 4 revolutions are needed at the input for 1 revolution with a 240 Nm torque to be obtained at the output.

This is based on the physical formula:

$$\text{Power} = \text{torque} \times \text{revolution}$$

With gear efficiency deducted, the output power can be considered as a constant equal to the input power. Thus multiplication of the torque can only be obtained from an increased number of revolutions at the input.

i

Force and reaction

When working with a torque multiplier, torsion wind-up is built up in the gear while the bolt is tightened. This stress must be reduced. A reaction absorbed by reaction arm and thrust bearing is produced.

Reaction arm made of light alloy, straight with adjustable locking knob with slave square: The reaction acts on the adjacent impact socket

Reaction arm cranked: The reaction acts on the adjacent bolt connection

Reaction arm straight without adjustable reaction square drive: The reaction acts on the wall. However, the resulting tilting moment means that the maximum permitted torque is reduced by 20%.

REACTION ARM MADE OF LIGHT ALLOY

straight with adjustable locking knob
with movable square-end

Reaction arm with adjustable locking knob

Reaction square can be released and shifted horizontally. This means the reaction arm can be adapted to the various flange screw fittings.

THE TORQUE MULTIPLIER IN TESTS

Our torque multipliers are tested to their limits.

Thanks to temperature and load tests, we can make statements about bolting operations in various climate zones and about the robustness and durability of the device.

Coldtest

The ambient temperature always has an influence on the degree of efficiency and therefore on the accuracy of the device. The torque multiplier was cooled to -40°C in a cold test. Due to the minimal lubrication in the planetary gearing, the temperature influence could be kept to a minimum and the device could be used as usual.

LKV cooled down to -40°C

Load test

If a torque multiplier is overloaded, there is no danger to the gearing. The square drive of the device has a predetermined breaking point. If a Torque Multiplier is overloaded, there is no danger to the gearing. The square drive of the device has a predetermined breaking point, breaking away cleanly if too much load is acting on the device. The broken-off square drive can be replaced without problems. The advantage is that no splinters or deformation occur during breakaway. The device remains functional.

GEDORE Torque Solutions GmbH:
Controlled breakaway

OTHERS: Uncontrolled breakaway can
damage other components

THE TORQUE MULTIPLIER

SERIES LKV, 50 - 1.300 Nm

Series LKV-12

Accessories for the LKV-12

Reaction arm cranked with lock on function, made of drop-forged chrome-vanadium steel

Reaction arm made of light alloy, straight with adjustable locking knob with slave square and retaining ring

Sun gear

TECHNICAL DATA LKV-12

Small, easy to handle, light but rugged

The smallest torque multiplier in this series is particularly suitable for maintenance purposes and in workshops. The little power packet has been reduced to the smallest possible dimensions without losing any robustness or torque power. It is equipped with an offset reaction arm and can be retrofitted with a straight reaction arm.

The sun gear acts as a predetermined breaking point if the device is overloaded. This protects both the operator and the device. The sun gear can be easily and rapidly replaced by the operator. Assembly and cost outlay remain low.

The optimal on-board tool

The LKV-12 has small dimensions and can fit in a pocket. This device is highly suitable for use as an on-board tool in utility or construction site vehicles. It can be stored in the vehicle in a stable transport case. Due to the minimum lubrication of the gear unit, the device is essentially temperature-independent and can be operated without problems even at freezing temperatures.

THE TORQUE MULTIPLIER

SERIES LKV, 100 - 2.800 Nm

Series LKV-20Z/28Z

Lean, high-performance aluminium housing is 30% lighter than a steel one

Output square as overload protection for gear unit protection

Supplied with individual GEDORE factory calibration certificate

Fixed reaction arm in straight or cranked version

Series LKV-20L/28L

Accessories for the LKV-20 and LKV-28

Reaction arm cranked
(bolted to the tool)

Reaction arm made of light alloy, straight
with adjustable locking knob with reaction
slave square (bolted to the tool)

Spare square
for LKV-20

Spare square
for LKV-28

TECHNICAL DATA LKV-20/28

Popular for flange bolt connections:
LKV-20/28L

The positioning of the torque multiplier must be implemented easily and rapidly, particularly for flange bolt connections. The LKV-L is equipped with a fixed straight reaction arm and is therefore a complete solution for flange bolt connections. The required spacing between two bolts can be rapidly and easily set using the adjustable reaction square, accelerating work.

Practical and easy to handle:
LKV-20/28Z

The LKV-Z series is particularly suitable for mechanical and plant engineering, maintenance and the transport industry. This series also has a fixed reaction arm, but cranked version. The gear unit is protected against overload with a shearing square which can be easily replaced.

THE COUNTER WRENCH

LKS SERIES, RSW 32 - 115 mm

LKS series

Accessories

Danger to assembly personnel must be avoided

Every user knows the problems and dangerous situations that can arise when counter-holding while a bolted connection is being tightened. The wrench used for counter-holding can often rotate with unpredictable torques, block or jump off. Once the bolting operation is complete, it often needs to be levered off or even knocked off.

The danger of injury for the assembly personnel is very high here and the risk of damaging neighbouring components or the tools is also significant. The results can be irritation, time loss and assembly downtimes.

The solution: The GEDORE Counter Wrench

Equipped with the appropriate insert, the device utilises a thrust bearing and absorbs the driving torque with the integrated mechanics. Following completion of the bolting operation, a simple press of the lever and the counter-wrench can be rapidly and easily released.

Frequently copied, but never matched

The patented mechanism of the GEDORE counter wrench is unique. Only the precise interplay of the individual components ensures correct and problem-free function. Cheaper copies can bend or stick under large loads. The ring inserts are made of forged chrome-vanadium steel as of size 70.
