Start Up Guide

1

Reset Mode

Auto - Auto resets the reading once the selected time period has expired (1, 3 or 5 seconds).
Manual - Resets the reading only once the user has pressed the Back button.

2

Test Mode

Track - Progressively tracks the applied torque.
First Peak - Displays the First Peak torque value as well as the Peak torque value over the entire test period.
Peak - Displays the Peak torque value over the entire test period.

3

Units

Allows the user to choose from a range of Metric and Imperial torque units that suit the particular tool being analysed. Once the desired units have been selected they will be displayed on the home screen.

4

Settings

Allows the user to adjust the device language, time and date. Gives the user access to a helpline if assistance is needed with the device. Access to Start Up Guide.

5

Tools

Allows the user to add, edit and select tools for torque analysis. Tolerance limits for testing can also be specified. Storage for 500 tools.

6

Data

Stores the data of up to 2000 torque analysis results. The data stored includes the time and date, the transducer and tool used and the physical results of the analysis.
